

Cloud Marketplace Lead Management

Stay on top of your best leads by connecting your Azure Marketplace or AppSource listing to your CRM.

Lead management at a glance

- **Ensure** you don't miss out on business opportunities.
- Understand who reached you and reach out to them.
- Integrate your CRM to manage your leads in one central location.

Process

Define a clear sales process, with milestones, KPIs, and clear team ownership

Qualification

Define prerequisites which indicate whether a lead has been fully qualified. Ensure sales or marketing representatives qualify leads carefully before taking them through the full sales process

Follow ups

Don't forget to follow up – expect the typical transaction to require 5 to 12 follow up calls

Nurture

Nurture your leads; this could get you on the way to a higher profit margin

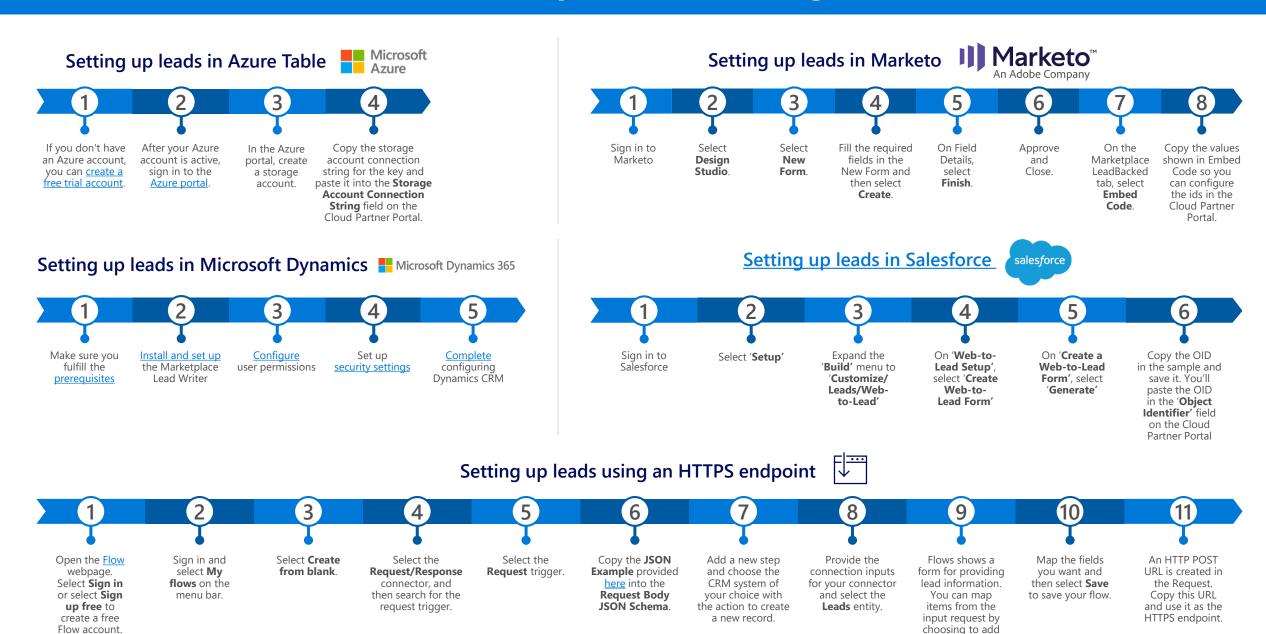

Things to know while you integrate your CRM

- * CRM compatibility. The following systems are supported: Azure Table, Azure Blob, Microsoft Dynamics, Marketo, Salesforce and HTTPS endpoint.
- * Read the documentation. To see how to set up a lead destination, read the documentation here, or check out the FAQ here.
- Configure a lead destination. This allows you to publish an offer on Marketplace (this is relevant to Contact Me SaaS apps, or Consulting Services).
- Confirm lead configuration. After setting up your offer, and lead destination, publish your offer; marketplace will send a test lead to the lead destination configured.
- **Need support?** Contact Support here → select 'problem type' → 'marketplace onboarding' → 'technical marketplace query.'
- * Can't find the lead in your CRM? The end user's email domain may originate from .edu. Microsoft won't pass PII data from .edu domains.
- Can't find the lead in Salesforce? Check if the web to lead form is a mandatory field based on a picklist. If so, change it to a non-mandatory text field.
